UNO ERP & CRM

CENTRAL EUROPE DMC OPERATIONS PLATFORM

Release 20261026 & Cloud Storage Master Feature Guide

Detailed User Manual, Enterprise Google Drive Architecture, Feature Changes & Bilingual AI Copilot Capabilities

Environment:	Production (`https://uno-dmc.cz`)
Release Tag:	Prod_Release_20261026 / masterbranch_20261026
Target Audience:	Operations Directors, Project Planners, Tour Guides, Accountants
Storage Backend:	Google Drive (`UNOERP_Storage` Cloud Hierarchy)
Published:	October 2026

1. The New Capabilities

1.1 Enterprise Google Drive Automated Storage Architecture

In previous versions, file storage was tied to the local disk of the web server, which introduced risks of disk quota exhaustion and missing attachments during server redeployments. Release 20261026 introduces a cloud-native architecture connecting directly to Google Drive via service account automation.

Figure 1.1: Official Google Drive Root Path: UNO RESERVATION > UnoERP > UNOERP_Storage

Automatic Project & Tour Provisioning

Whenever a project or tour is created or retrieved in UNO ERP, the system automatically checks and provisions the complete folder hierarchy on Google Drive without requiring manual user setup:

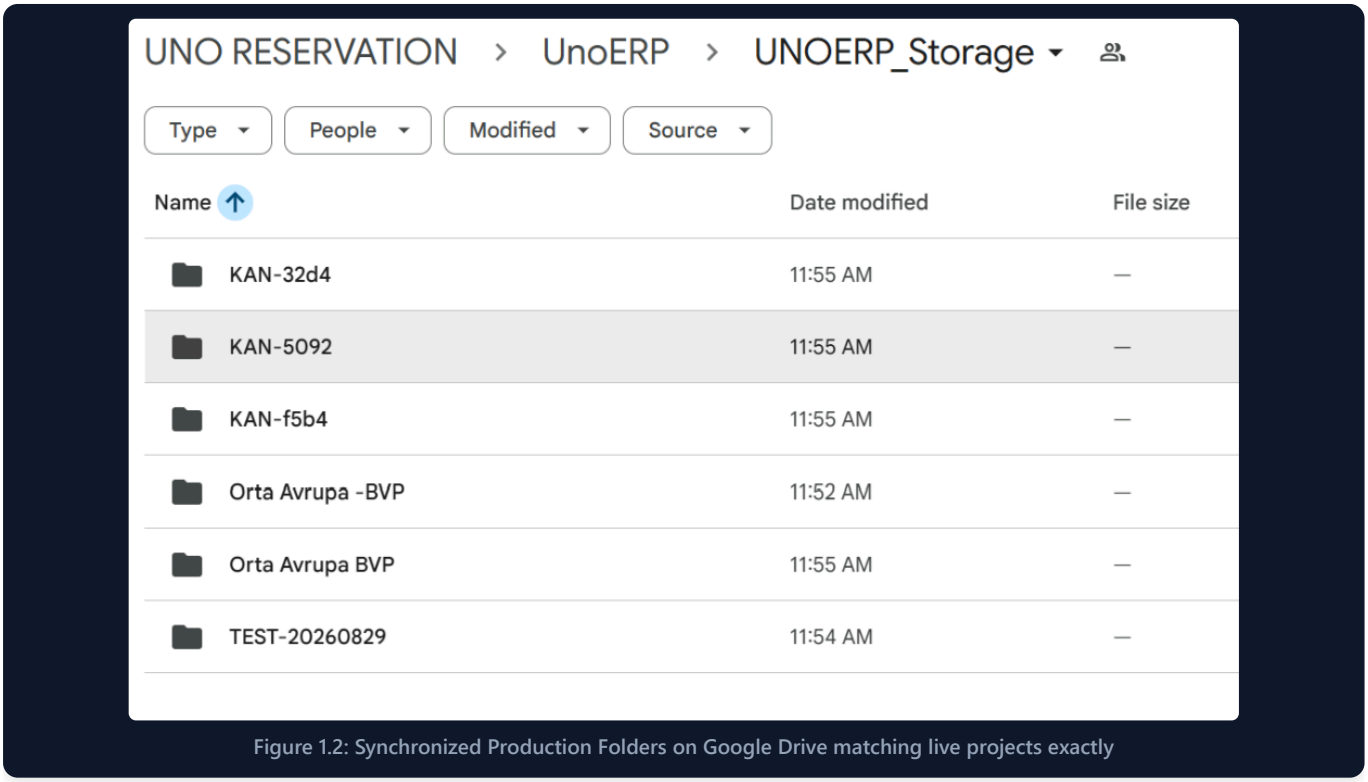

Figure 1.2: Synchronized Production Folders on Google Drive matching live projects exactly

Standardized Hierarchy per Tour:

- `UNOERP_Storage/[ProjectCode]/` — Dedicated folder for the master project.
- `.../[TourCode]/Import/` — Dedicated repository for passenger manifests, rooming lists, and Excel files.
- `.../[TourCode]/Invoice/` — Automatic destination for generated tour vouchers, supplier bills, and invoice PDFs.

> **Operational Tip for Users:** All operations team members with Google Drive access can view passenger manifests and invoice receipts directly from Google Drive on their phones or tablets in real-time, even when away from the CRM workstation.

1.2 Executive KPI Cockpit

To provide high-level leadership with instantaneous financial and operational oversight, a dedicated **Executive KPI Cockpit** has been introduced under the main Dashboard navigation.

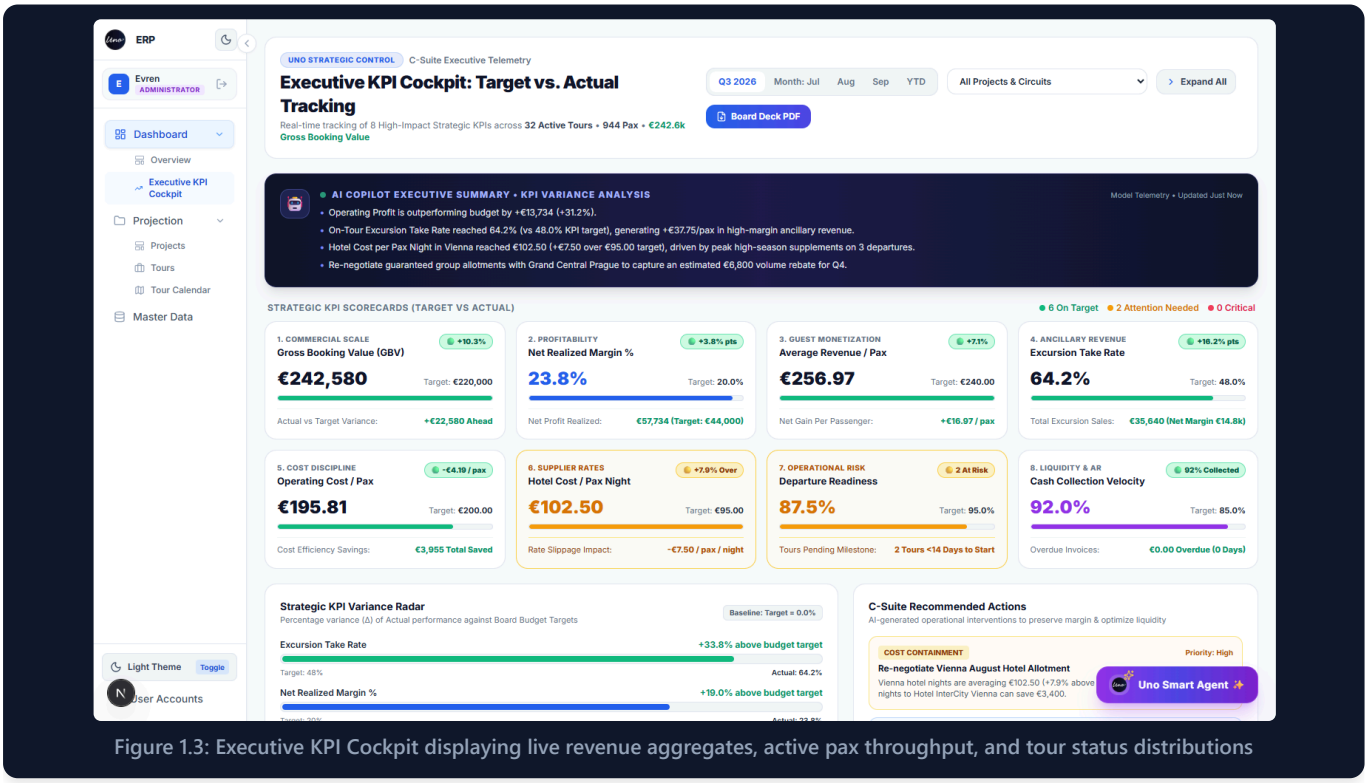

Figure 1.3: Executive KPI Cockpit displaying live revenue aggregates, active pax throughput, and tour status distributions

1. **Total Portfolio Budget & Net Margin:** Aggregates live budgets from all active and completed projects, automatically factoring in vendor costs and excursion sales.

2. **Real-time Pax Throughput:** Displays the count of passengers currently travelling across Budapest, Vienna, Prague, and Switzerland.

3. **Status Distribution Visualizers:** Color-coded charts showing tours across Draft, Planning, Active, and Completed statuses for quick risk assessment.

1.3 Guide Portal & Field Excursion Sales Management

Tour leaders and guides on the road now have direct access to the **Excursion Sales Ledger** under each Tour Detail view (Tab 5). This allows seamless on-tour cash management and automated commission calculation.

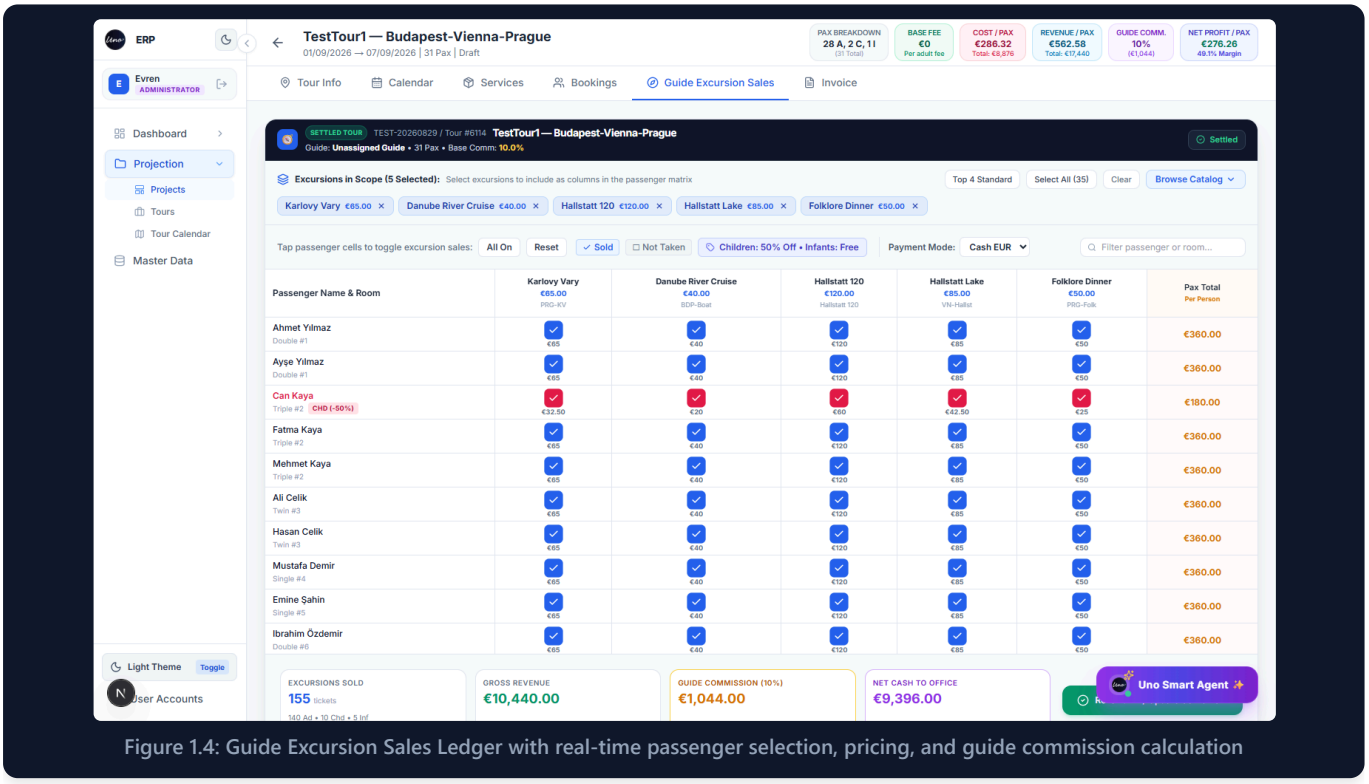

Figure 1.4: Guide Excursion Sales Ledger with real-time passenger selection, pricing, and guide commission calculation

Step-by-Step: Recording an Excursion Sale on the Tour

1. **Select the Tour:** Navigate to `Tours` or `Projects` > `Tours`, click on the active tour, and select the **Guide Excursion Sales** tab.

2. **Add Sale Entry:** Click **+ Add Excursion Sale**. Select the predefined excursion (e.g. *Danube Dinner Cruise*, *Karlovy Vary Day Trip*, *Czech Night*).

3. **Assign Passengers & Rooms:** Pick the rooms/passengers purchasing the ticket. Pricing and currency (EUR/CZK) auto-populate based on master excursion settings.

4. **Automatic Commission & Balance:** The guide's commission is calculated automatically and credited to the tour financial summary, eliminating spreadsheet errors.

1.4 Resilient 4-Tier Excel Import Pipeline

Importing large passenger lists from tour operators like WTATIL often suffered from mismatched column names or renamed Excel sheets. The new 4-tier pipeline automatically inspects incoming files and resolves format discrepancies.

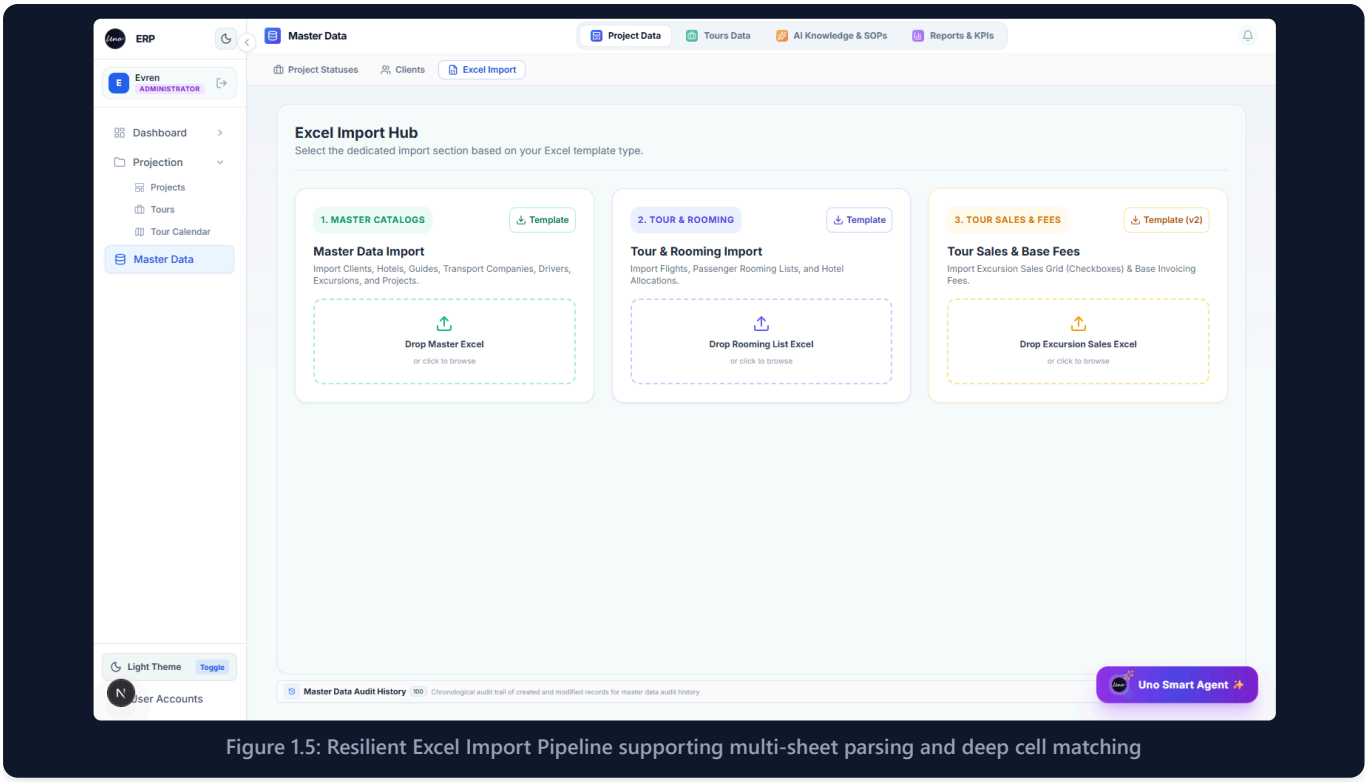

Figure 1.5: Resilient Excel Import Pipeline supporting multi-sheet parsing and deep cell matching

Tier	Scan Mechanism	Handled Discrepancy
Tier 1	Worksheet Name Normalization	Accepts singular and plural variations: `tour`, `tours`, `room`, `rooming`, `pax`
Tier 2	Filename Extraction	Extracts Project and Tour codes directly from standard naming (e.g. `PRJ1_Tour1_rooming.xlsx`)
Tier 3	Deep Cell Header Heuristics	Detects column headers dynamically regardless of whether they appear on Row 1, 2, or 3
Tier 4	Diagnostic Error Feedback	Provides precise, user-friendly mismatch explanations instead of technical server crash dumps

2. Changes on Main Features

2.1 Projects Management & Kanban Board

The Projects dashboard at `uno-dmc.cz/projects` has been enhanced with high-contrast status lanes and comprehensive multi-tab project detail views.

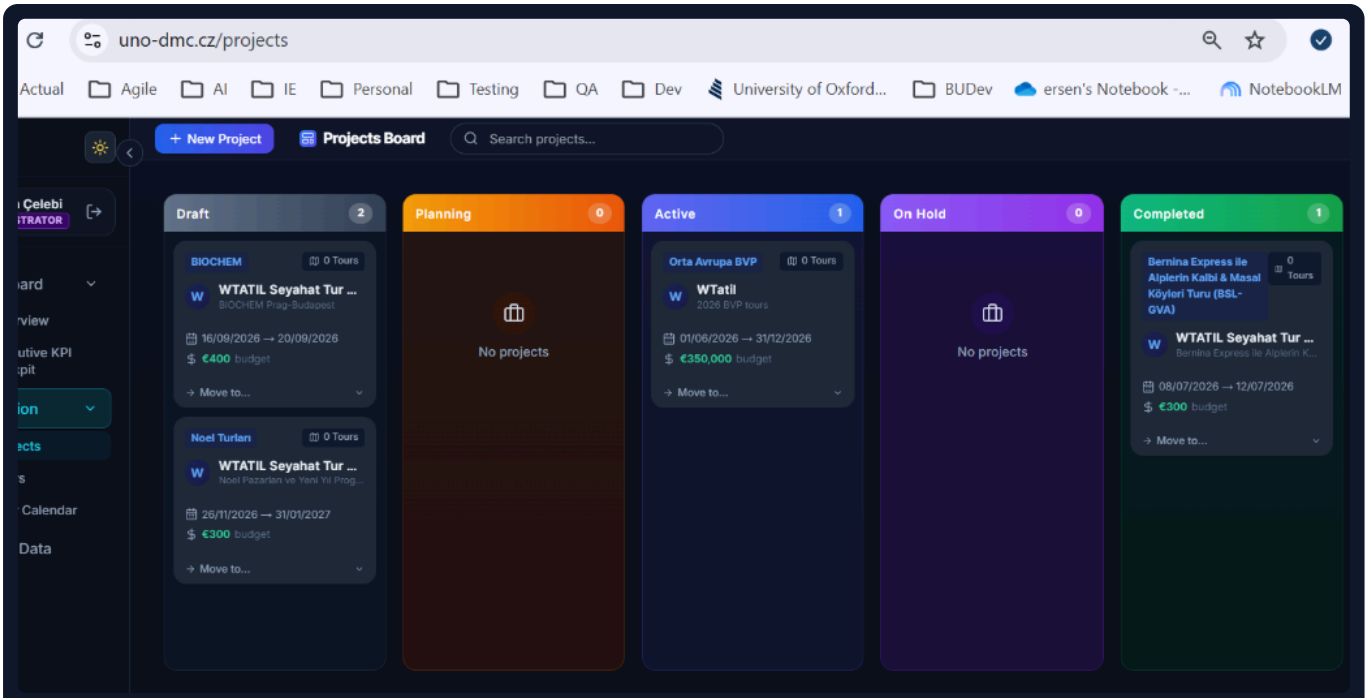

Figure 2.1: Live Production Projects Board with Draft, Active, and Completed lanes

Project Detail Workspace Tabs

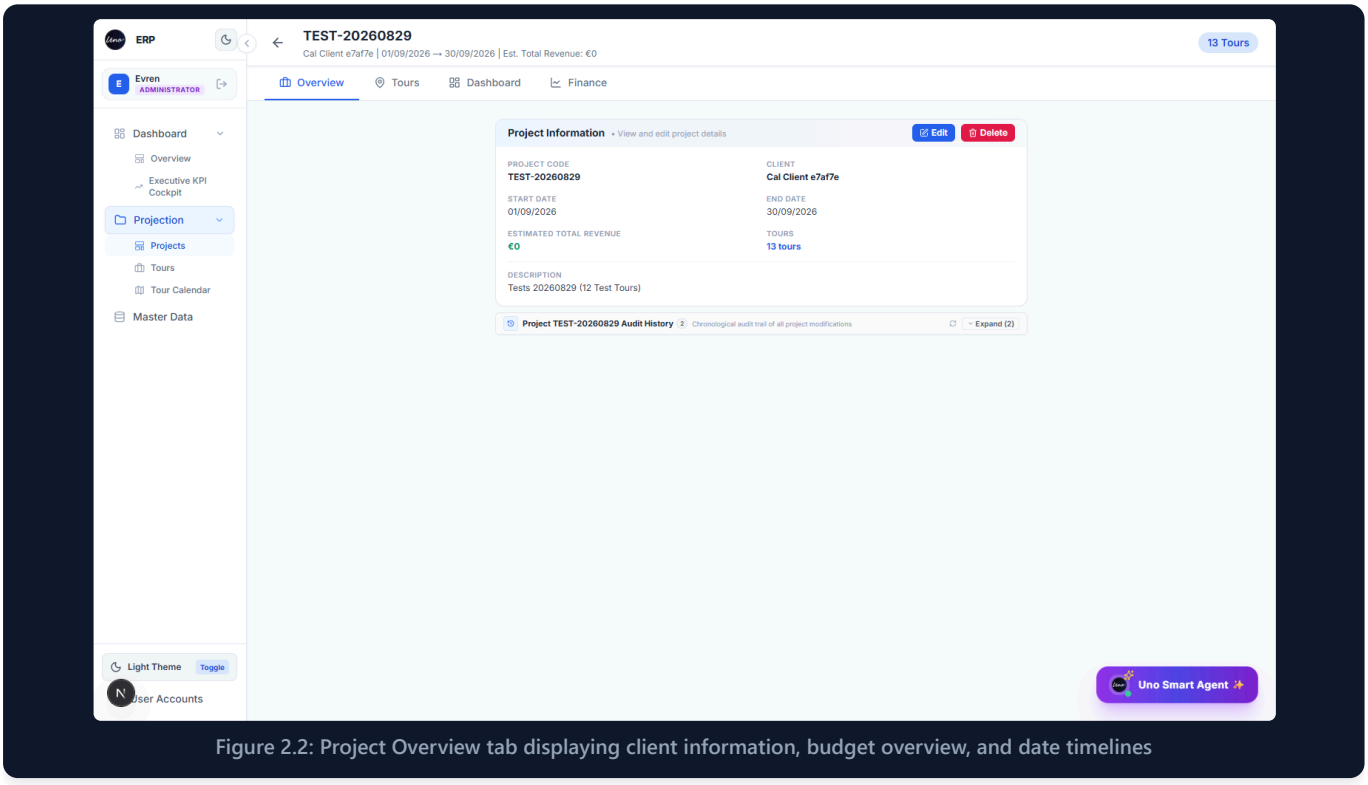

Figure 2.2: Project Overview tab displaying client information, budget overview, and date timelines

- **Overview Tab (Figure 2.2):** Key client contact information, total estimated budget, active date boundaries, and contract notes.
- **Tours Tab (Figure 2.3):** Direct tabular list of all tours operating under the project, showing assigned guides, pax totals, and current status badges.
- **Finance Tab (Figure 2.4):** Project-level cash flow summary, supplier payment ledger, and client pre-payment balances.

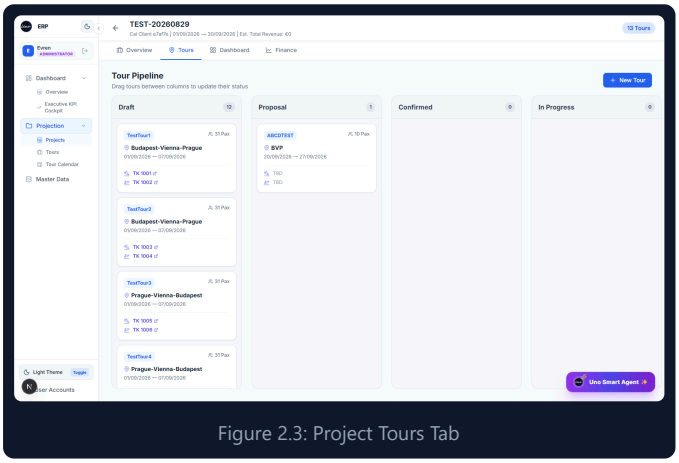

Figure 2.3: Project Tours Tab

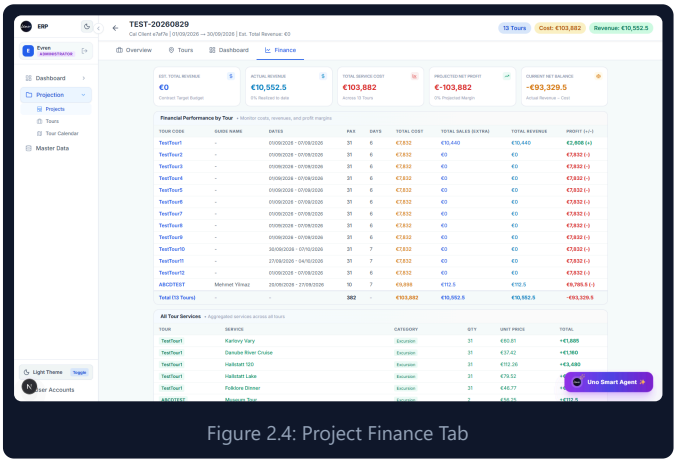

Figure 2.4: Project Finance Tab

2.2 The 6-Tab Tour Workspace

Every operational tour now benefits from a standardized 6-tab layout designed to minimize clicks and eliminate navigation friction.

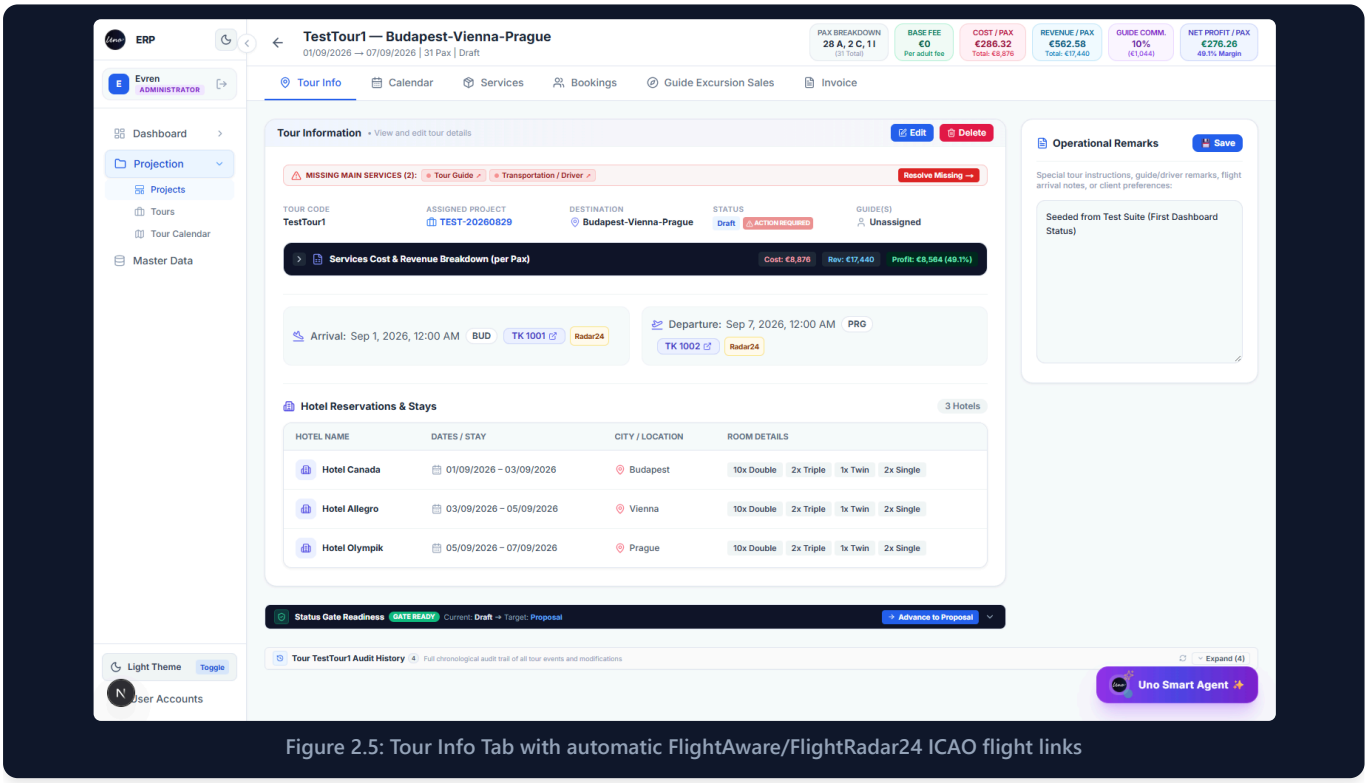

Figure 2.5: Tour Info Tab with automatic FlightAware/FlightRadar24 ICAO flight links

Tour Workspace Tabs Breakdown:

Tab	Key Elements	Operational Value
1. Tour Info	Pax counts, arrival/departure flights, primary hotel, base fee	One-click live flight tracking links (auto-converts TK1767 to THY1767)
2. Calendar	City-by-city routing timeline, dates, check-in/check-out	High-contrast visual timeline of the tour journey
3. Services	Transport, Guide, Restaurant, Boat, and Museum bookings	Automatic validation alerts if critical services (buses/guides) are missing
4. Bookings	Passenger manifest, room allocations (SGL, DBL, TWN, TRP)	Instant matching against imported Excel rooming lists
5. Excursion Sales	Field sales ledger, commission calculations, cash intake	Direct guide settlement on tour completion
6. Invoicing	Voucher generator, client invoices, PDF downloads	Directly links and uploads files into the Google Drive `Invoice/` folder

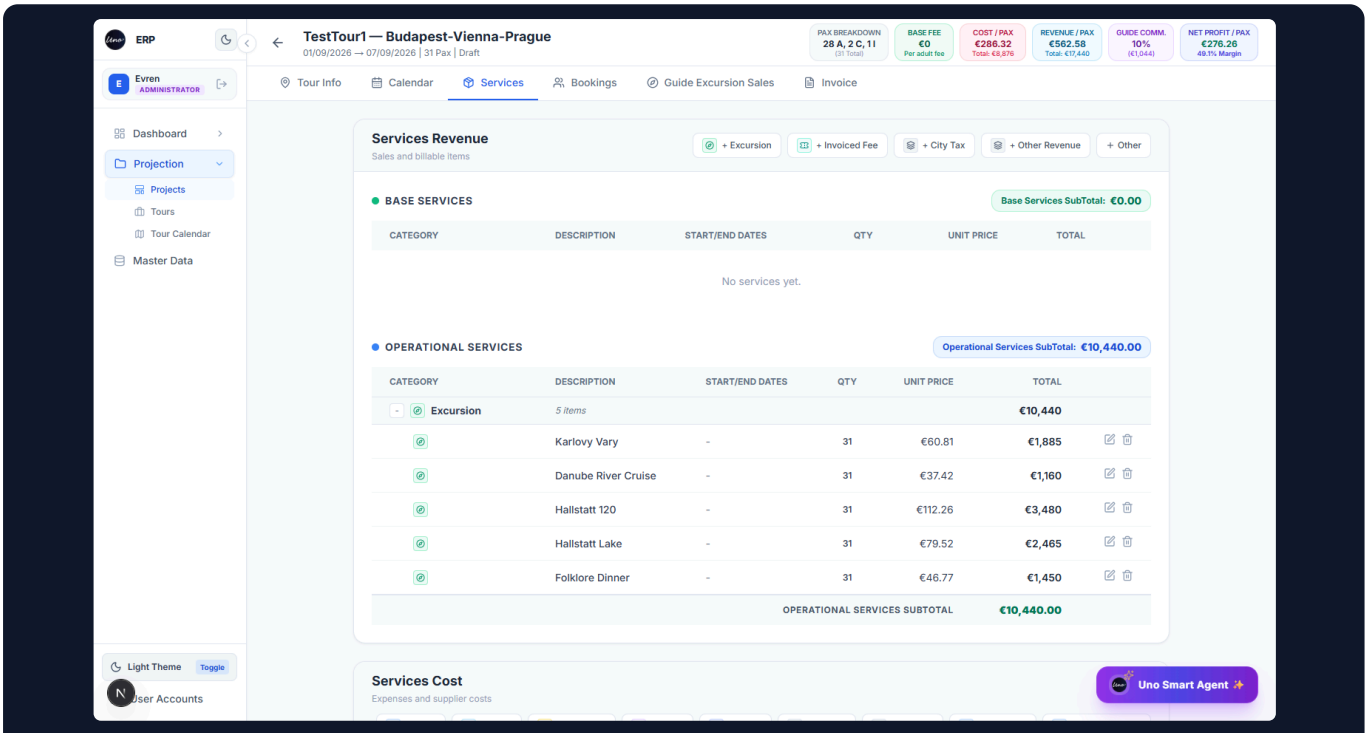

Figure 2.7: Tour Services Tab with category-based service allocations and missing service checks

3. New AI & Copilot Capabilities

3.1 AI Copilot & Bilingual RAG Engine

The AI Copilot has been upgraded to a Retrieval-Augmented Generation (RAG) architecture with **100% Turkish and English parity**. It serves as an instant 24/7 operations assistant for team members.

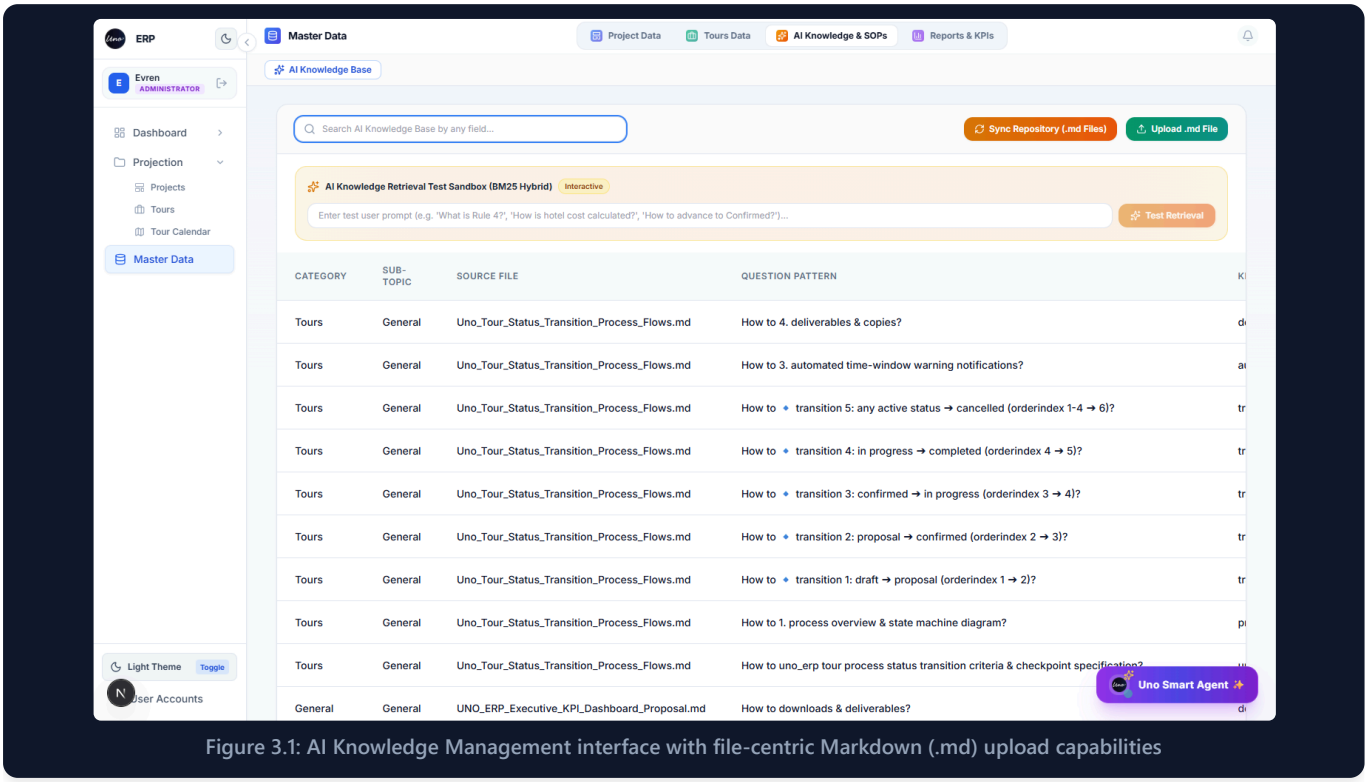

Figure 3.1: AI Knowledge Management interface with file-centric Markdown (.md) upload capabilities

Key Capabilities of the AI Copilot:

- **Sub-Topic Guided Pills:** When opening the AI chat drawer, users see dynamic pills such as "*Excel Import Guide*", "*Flight Tracking Rules*", "*Rooming List Guidelines*", or "*Missing Services Audit*". Clicking a pill retrieves instant answers without typing long prompts.
- **File-Centric Markdown Ingestion:** Operational manuals, hotel cancellation policies, and client agreement guidelines can be uploaded as `.md` files directly into the knowledge repository. The AI automatically indexes and learns the new SOPs within seconds.
- **Clean Output Formatting:** AI responses are delivered in clear, readable markdown with bullet points, structured checklists, and clickable links, without distracting raw source tags.

3.2 Itinerary Copilot & Automated Budget Estimation (Preview)

Designed for the projection phase when tour operators request quotes for upcoming seasons:

- **Multi-City Itinerary Generation:** AI drafts day-by-day travel programs (e.g. Prague 3 nights, Vienna 2 nights, Budapest 2 nights), selecting recommended excursions and optimal routing.
- **RateHawk Hotel Catalog Integration:** Connects with B2B hotel search APIs to provide instant room-rate estimates based on passenger cohorts, even before exact passenger names or rooming lists are finalized.
- **Scrum Team Simulator Synergy:** Integrates with autonomous engineering agents (`@01-AI_team`) to groom project requirements and generate test suites automatically.

3.3 Automated Anomaly Auditing & Compliance

Live System Safeguards in Release 20261026:

1. **Missing Services Validation:** Automatically scans all tours departing within 14 days and flags any missing bus, guide, or hotel reservations directly on the calendar and tour cards.
2. **Flight Ident Normalization:** Automatically converts colloquial flight strings (e.g. `TK 1768` or `PC 312`) into standardized ICAO formats (`THY1768`, `PGT312`) to ensure real-time flight tracking links always open without 404 errors.
3. **Admin-Only Deletions:** Projects and tours can only be deleted by authorized administrative accounts, protecting against accidental record loss.
